

On the Results of the Conference on the Theory of  
Metallic Alloys. Vestnik Akademii Nauk SSSR  
22 (1952) no. 11, p. 116

1. The Presidium of the Academy of Sciences of the USSR listened to a report on this conference. Because of the great importance of metallic alloys and the inadequacy of the theoretical and experimental development of this subject, the Presidium acknowledged the need for appreciably strengthening research in this field, particularly on the investigation and construction of constitution diagrams.
2. The stress placed on constitution diagrams is interesting since such research seldom has any immediate practical application.
3. The actual report on the conference appeared in issue no. 8 (1952) of this magazine.
4. The article starting on p. 65 covers the 'branches, of the academy of sciences, their history, and organization, specialties - book work they have done in the past and current fields of interest.
